Claims 1 and 3 to 7

The invention set forth in claims 1 and 3 to 7 does not involve an inventive step in the light of documents 1 to 3 cited in the international search report.

Document 1 sets forth a steam cooker provided with a steam producing device which comprises an external circulation path for returning air sucked in from the heating chamber through spout holes, and which feeds steam into the vapor which passes through the external circulation path, wherein steam is fed to a position downstream of the blower inside the external circulation path.

In addition, in steam cookers, it would be a known

technique to a person skilled in the art to blow out vapor sucked in from the heating chamber so as to collide with the item to be heated in the heating chamber, and to employ an ejector in inserting steam into the conduit line (see, for example, document 2 for the former, and documents 2 and 3 for the latter).

In addition, determining what to employ as a fan-driven motor is merely a design matter which a person skilled in the art should select as necessary.
